```

The present invention describes a method for the use of irinotecan (I) of its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance protein 1 (MRP1) polynucleotide (II). (I) has cytostatic accivity, (I) or its derivative can be used for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject, where the subject is a human

                         The invention relates to the novel use of irinotecan to treat a patient suffering from cancer. This involves determining if the patient has one or more variant alleles of the UGTIA1 gene, and if the patient has one or more of such variant alleles, irinotecan is administered in an increased or decreased amount in comparison to the amount that is administered without regard to the patient's alleles in the UGTIA1 gene. The invention has cytostatic activity. A composition of the invention acts as a topoisomerase I inhibitor. The method is useful for treating a patient, an animal e.g. mouse or a human, preferably African or Asian, suffering from cancer such as colorectal, cervical, gastric cancer, lung, ovarian, pancreatic cancer or malignant glioma. The present sequence is udes in the exemplification of the invention.
                                                                                                                                                                                                                                                 Use of irinotecan to treat cancer patient by determining if patient has variant alleles of UGTIA1 gene, administering increased/decreased amounts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to the novel use of irinotecan or its derivative for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition of the invention has cytostatic activity. The invention is useful for the preparation of pharmaceutical compositions for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject (preferably human, more preferably African or Asian) or a mouse. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        irinotecan; colorectal cancer; cervical cancer; gastric cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC transcription units that populate a genome. The library comprises several CC cranscription units that populate a genome. The library comprises several CC oligonuclectides, each capable of hybridising selectively to a set of CC messenger RNAs transcribed from a given transcription unit of the genome, CC which encodes one or more messenger RNA splice variants. The CC oligonuclectide libraries are useful for detecting mRNAs from a CC detecting RNA transcripts and splice variants of nualitatively or CC quantitatively characterising the corresponding transcriptome, and in CC detecting RNA transcripts and splice variants of human or animal CC transcriptomes. The libraries may also be used as specialised mini CC libraries to detect transcripts of a sub-transcriptome under a particular CC biological or pathological state, and so allowing the detection of tissue can pathology-specific genes such as those genes only expressed in Specific tissue under a specific pathological condition, to detect wariants of a transcriptome of a pathological condition, to detect variants of a transcriptome of a patient suffering from a particular CC developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular CC disorder. ABN27253 to ABN95989 represent oligonucleotide sequences from CC rats, humans and mice, which are used in the exemplification of the printed specification, but was obtained in electronic format CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention relates to diagnosing a corticotropin-releasing hormone (CRH)-induced gene expression profile in an individual. The method involves determining the level of gene transcription of a gene comprising a nucleic acid sequence selected from 28 nucleotide sequences fully defined in the specification or determining the amount of at least one protein that modulates CRH signaling in the sample, where the protein comprises 13 amino acid sequences given in the specification. The methods and composition are useful for diagnosing, treating and/or preventing CRH metabolism-related disorders, such as CRH-induced depression or stress. The polymucleotide is used as a marker of CRH signaling in a cell. These composition and methods may also be used in identifying compounds that modulate CRH-induced depression and stress. The present sequence represents a specific example of a gene fragment that is an important mediator of CRH-induced changes in the CNS.

26-OCT-2000; 2000US-0243542P

(BGHM) BRIGHAM & WOMENS HOSPITAL INC.

25-OCT-2001; 2001WO-US049856

02-MAY-2002.

Treating a subject (at risk of) having a hematologic malignancy or multidrug resistance, e.g. lymphoma or myeloma, by administering hypoxia inducible factor 1 binding molecules or small ubiquitin-like-modifier-1 binding molecules.

WPI; 2002-471427/50.

Colgan SP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      element (HRE) binding molecules or antisense nucrear acta molecules. SUMO-1 binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphopycoliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia. e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human mdrl gene HIF-1 binding site DNA
          Treating a subject (at risk of) having a hematologic malignancy or multidrug resistance, e.g. lymphoma or myeloma, by administering hypoxia inducible factor 1 binding molecules or small ubiquitin-like-modifier-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; haematologic malignancy; multidrug resistance; MDR; SUMO-1; hypoxia inducible factor-1; small ubiquitin-11ke-modifier; HIF-1; lymphoid disorder; chronic lymphopoliferative disorder; lymphoma; myeloid disorder; lymphocytic leukaemia; thrombocythaemia; myeloma; angiogenic myeloid metaplasia; myeloid leukaemii; gene therapy; polycythaemia vera; hypoxia responsive element; HRE; antisense;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mdr1-HRE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of treating a subject having or at risk CC of developing a haematcologic malignancy or multidrug resistance (MDR). CC The method involves administering hypoxia inducible factor-1 (HIF-1) CC binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or amail sense moderies and responsive celement (HRE) binding molecules or antisense mucleic acid molecules and CC SUMO-1 binding molecules or antisense molecules are useful for treating a cc subject having or at risk of developing haematologic malignancy or MDR CC (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders cinclude lymphocytic leukaemia or chronic lymphoproliferative disorders ce.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid CC disorders include chronic or acute myeloid leukaemia, e.g. angiogenic convention is used in gene therapy. The present sequence is an antisense cc oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its cross convention. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
   The invention relates to a primer for amplifying a nucleic acid comprising a 15 to 30 base continuous oligonuclectides of an MDR1 (multiple drug resistance gene 1) gene fragment appearing as ABK87740. Also included are a kit for quantitatively determining the expression level of MDR1 gene, a probe for capturing a nucleic acid, a reagent fo amplifying a nucleic acid and diagnosis of the drug resistance of a patient. The primer is useful for the determination of MDR expression level by nucleic acid amplification. The present sequence is a fragmen
                                                                                                                                                                                                                                                                                                                                                                                    A primer for amplifying a nucleic acid comprises a specific oligonucleotide sequence for determination of Multiple Drug gene expression level by nucleic acid amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2002-552738/59.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 120 BP; 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a primer for amplifying a nucleic acid comprising a 15 to 30 base continuous oligonucleotides of an MDR1 (multiple drug resistance gene 1) gene fragment appearing as ABR8740. Also included are a kit for quantitatively determining the expression level of MDR1 gene, a probe for capturing a nucleic acid, a reagent for amplifying a nucleic acid and diagnosis of the drug resistance of a patient. The primer is useful for the determination of MDR expression level by nucleic acid amplification. The present sequence is a fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A primer for amplifying a nucleic acid comprises a specific oligonucleotide sequence for determination of Multiple Drug gene expression level by nucleic acid amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MDR1; ds; multiple drug resistance gene; nucleic acid amplification; MDR1 expression level; multiple drug resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-OCT-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Probe; microarray genetic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probe #19069 used to measure gene expression in human placenta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-OCT-2001
                                                                                                                                                                                                                                      Human; bone microarray;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200157272-A2
